

25, WILTON PLACE.  
S.W.

Jan 21 1873

My dear Gray

Many thanks for your last  
notes. Vol 80 of Leveion Journal  
(Letters S. American maps) has been  
sent as you desired by post as it would  
be too long to wait for General Sherman.  
I can very seldom get the printers to  
do more than a sheet a week and  
there are still six or seven sheets to  
print, and with the Sunday it will  
be full six weeks before the part  
is ready - Pray send me word in  
what channel the parcel is to be  
sent to you - You say I think that I  
may send you 12 copies - and I will

put up with them as you desire the  
Icones Plantarum for Dr Torrey beginning  
with the new leaves (vol xi)

I yesterday posted for you two sheets  
of Gen. Pl. - to p. 304 - prospect corrected  
to p. 400 the post will extend to beyond  
500 and there will be the bottom  
of Addeida. We have received 2 new  
genera. Remia of K. Schrad from  
the Sandwich Isles a very distinct  
one which on account of some development  
of the upper teeth in the ligulate flange  
~~which~~ he refers to Labiateflora. But  
it is certainly not Muticiflorae but  
allied to Grindelia though quite  
distinct. The other is an opposite leaved  
P. African plant near Perthia. M. Owen  
and Bolus are continually sending up

curiosities from C. Africa

I will attend to your directions  
about the address & bill for Torrey's  
parcel

Yours very sincerely  
George Dontham

I am working up Australian Breeds  
of which I think I shall have near 200
